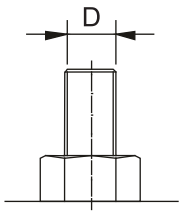
6-step plan for selection of stud tension cylinders

Step 1
cylinder selection by bolt diameter

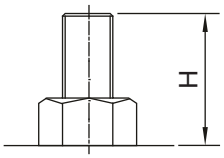
Step 2
check height of threaded rod

Step 3
check stud tension force

Step 4
check cylinder dimensions



stud tension cylinder	bolt diameter - through to	
	mm	inch
HHX 14	M20 - M22	3/4 - 7/8
HHX 22	M24 - M28	1 - 1 1/8
HHX 35	M30 - M34	1 1/4 - 1 3/8
HTX 50	M36 - M40	1 1/2 - 1 5/8
HTX 70	M42 - M46	1 3/4 - 1 7/8
HTX 100	M48 - M56	2 - 2 1/4
HTX 150	M60 - M68	2 1/2 - 2 3/4
HTX 180	M72 - M76	2 3/4 - 3
HTX 220	M76 - M80	3 - 3 1/4
HTX 260	M80 - M85	3 1/4 - 3 1/2



minimum height of threaded rod above flange

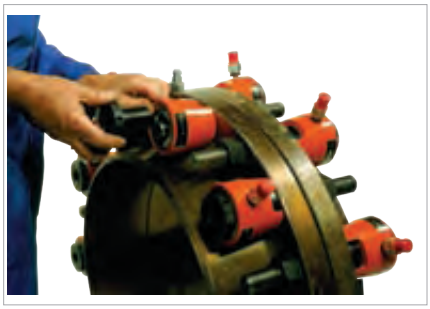
260	2601

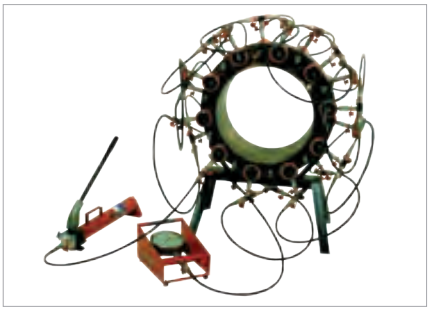
see table stud tension cylinders, pages 124 and 125

Stud tension cylinder system



Placing cylinder and pulling nut over nut socket and bolt.

The tommy bar makes the nut socket (and therefore the nut) turn very easily.

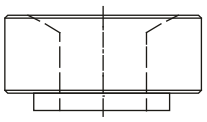


A complete set-up in which a cylinder has been placed on every bolt (so-called 100% occupation).

6-step plan for selection of stud tension cylinders

Step 5

assembly of a stud tension cylinder



stud tension cylinder

model	art no

110.181.094	16

* THREAD = thread type x pitch (e.g. M36 x 4)
** SLW = key size of nut (e.g. SLW 50)

Step 6

additional items for connection or operation, based on the n-number of cylinders that will be used in a coupled situation

no	description	mention with order
n	connection pieces	connection pieces A 240 U, art no 110.582.240
n-1	hoses between the cylinders	e.g. hose, model X 1.2 MU, art no 110.572.012 (for further specifications see section 'Pumps and hoses', page 127).
2	hoses to pump and pressure gauge	e.g. hose, model X 3 MU, art no 110.572.030 (for further specifications see section 'Pumps and hoses', page 127).
1	pump (hand or foot operated)	e.g. hand pump, model HTWX 1800 BU, art no 110.142.003 (for further specifications see section 'Pumps and hoses', page 127).
1	pressure gauge	pressure gauge A 148 U, art no 110.582.348 (for further specifications see section 'Couplers and accessories', page 128)

Recommendation with respect to the number of cylinders to be used: the best result is achieved with a 100% occupation. This implies that every threaded rod is provided with a stud tension cylinder and is tensioned simultaneously.
Lower occupation is possible. However, increasingly make sure that the force is evenly increased in steps along the contour of the object to be tensioned.

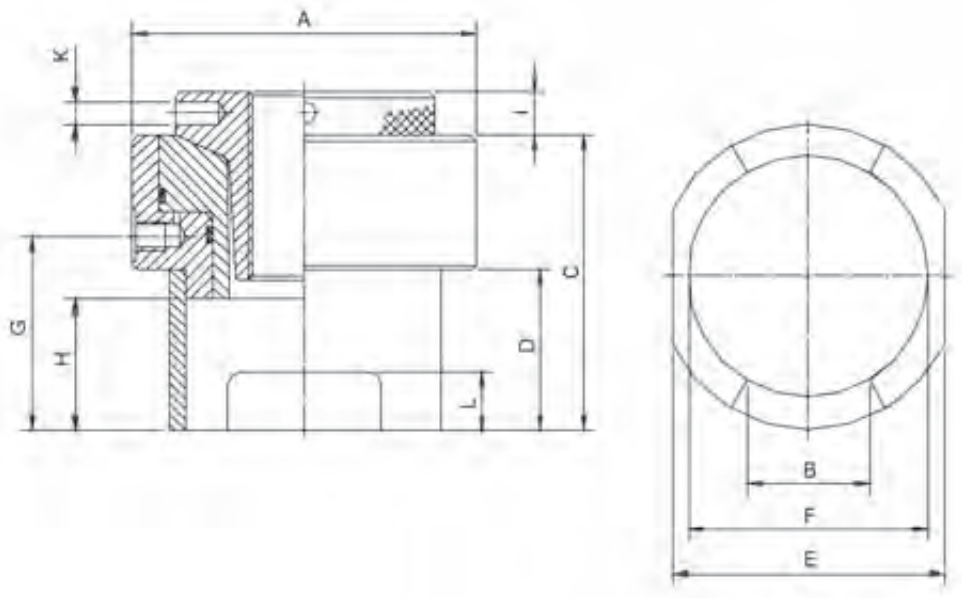
Stud tension cylinders excluding cylinder bridge



Specifications / important properties

- HHX cylinders standard provided with cylinder seat
- HHX cylinders standard not provided with cylinder seat, see accessories
- compact and lightweight
- usable in all positions
- high-quality and refined chrome nickel steel
- automatically locking quick coupler
- pulling nut is manufactured in conformity with customer specifications based on exact thread and bolt dimensions
- nut socket is manufactured in conformity with customer specifications based on exact key size of the nut
- advantages compared with traditional stud tensioning methods
  - the effects of friction are negligible; higher accuracy when tightening the bolt
  - time-saving; several cylinders can be coupled for simultaneously tensioning several bolt connections

Available on request

- stud tension cylinders manufactured in conformity with customer specifications
- extended pulling nut
- heightened or lowered bridges (HTX)

Specifications / important properties

- pumps:
  - suitable for large volumes
  - low power required while pumping; first stage will be fully pressureless after switch to second stage
  - automatic transition from first to second stage
  - large oil output per stroke
  - provided with dipstick
- hydraulic hoses:
  - anti-kink springs on both sides
  - 4:1 safety ratio
  - colour: blue
